Aviation Electronic, Electrical, and Computer Systems Technicians (AV)

Aviation Electronic, Electrical, and Computer Systems Technicians work with some of the most advanced electronics equipment in the world and repair a wide range of aircraft electrical and electronic systems. Repair jobs can range from trouble-shooting the computer-controlled weapon system on an F/A-18 Hornet on the flight deck of an aircraft carrier to repairing circuit cards or tracing electrical wiring diagrams in an air-conditioned work center. Most of these technicians are trained in computers to support state-of-the-art equipment or on power generators and power distribution systems to support aircraft electrical systems.

These technicians may also volunteer to fly as Naval aircrewmen. Aircrewmen perform numerous in-flight duties and operate radar and weapon systems in turbojet, helicopter, or propeller driven aircraft. Aircrewmen earn additional pay for flying. (See the Aircrew Program for details.)

What They Do

AV sailors attend common basic electronics training, after which they are selected for either the Aviation Electrician (AE) rating or the Aviation Electronics Technician (AT) rating.

Depending on selection to AE or AT, the AV sailor will troubleshoot and repair some of the following complex electronic systems, employing the latest test equipment and procedures:

- digital computers
- fiber optics
- infrared detection
- radar systems
- electricity generation systems
- laser electronics
- navigation systems
- communications equipment
- electrical power distribution
- pressure indication systems
- electric transformers and circuits

Technicians may also perform the following functions:

- Testing aircraft instruments and systems such as automatic flight controls, inertial navigation, and compass systems;
- Installing changes, alterations, and modifications to aircraft electronics systems;
- Performing micro-miniature module repair on computer circuit cards;
- Using a variety of electrical measuring and diagnostic equipment;
- Reading electrical system diagrams;
- Repairing and maintaining power generators and electric motors.

Credit Recommendations

AT: The American Council of Education (ACE) recommends that credit be awarded in the vocational certificate or a lower-division bachelor's/associate's degree category for courses taken in this rating on basic electronics, trouble-shooting techniques and introduction to physics.

AE: The American Council of Education (ACE) recommends that credit be awarded in the vocational certificate or a lower-division bachelor's/associate's degree category for courses taken on aircraft electrical maintenance in this rating.

Qualifications and Interests

Personnel in this field must be U.S. citizens eligible for a security clearance. Normal color perception is required.

Applicants in this career field will work on some of the most technologically advanced aircraft in the Navy. Applicants should have an interest in aviation and working with or around aircraft. They should have a high degree of manual dexterity with tools, equipment, and machines for detailed precision work. They should have a strong interest in electrical or computer systems and be ready to tackle a tough academic curriculum in electronics training. They should have a desire to be resourceful parts of a team effort. Helpful attributes include arithmetic knowledge, writing ability, speaking skills, good memory, and physical fitness.

Working Environment

Sailors in this career field will perform duties at sea and ashore around the world. At various times they could be working at a land-based aircraft squadron or onboard an aircraft carrier, either indoors or outdoors, in a shop environment or in office surroundings, and at a clean lab bench or in a garage-type situation. They work closely with others, require little supervision, and do mental and physical work of a technical nature.

Opportunities

Opportunities for placement in this career field are excellent for qualified personnel. About 13,000 men and women now work in this field.

Related Civilian Jobs-- O-Net SOC Code

49-2091.00 Avionics Technicians
49-3011.00 Aircraft Mechanics and Service Technicians
51-9061.00 Inspectors, Testers, Sorters, Samplers, and Weighers

Since Navy programs and courses are revised at times, the information contained on this rating card is subject to change.
